

**FLORA.** Automatic POT PLANT wrapper.

Cycle speed.	10 products per minute.
Floor space required.	2.5 square meters.
Minimum bag size.	80mm diameter X 200mm high.
Maximum bag size.	140mm diameter X 500mm high.
	Other sizes will be considered.

**Bags are produced from roll stock reducing the cost of pre-made bags.**

Film specification.	All heat sealable films including PE. PP. printed or plain. We are able to run sealing trials with all films. The standard bag will be sealed top and bottom with punched carry holes above the top seal. An open top bag will also be available.
---------------------	---

We will also be able to supply an impregnated disk for use with sealed bags, which will overcome the need for white light, feed or water.

**NATURAL DISK FOR ORNAMENTAL PLANTS**

Our natural disk is an innovative solution for plant conservation in total absence of light and water.

The disk that is a natural absorbent and is completely biodegradable is placed inside an anti-fog packaging film together with the plant. The disk must be placed under the plant container and the film hermetically closed with a light micro perforation to create the ideal environment that will increase the plants shelf life.

Tests in laboratories and greenhouses have shown excellent results. Species tested conserved their natural status up to 30 to 35 days.
