

UNICA is an horizontal packaging machine with a continuous rotative movement and longitudinal seal at the bottom. UNICA is suitable to create bags with the classical flow-pack style around different kinds of products (with or without trays). UNICA can reach a very high speed: up to 250 cycles per min. with double jaws. Every movement is managed by brushless main motors to guarantee a long-term reliability and always perfect seals. UNICA has a 7 inches multicolour monitor and it can save more than 50 programs. The best materials, our experience and technical knowledge, have allowed us to obtain a very efficient and modern machine. UNICA can work continuously and autonomously without particular cautions. UNICA can be completed with various accessories: automatic feedings, printers for date, price, code, etc.

TECHNICAL DATA

Max. speed: 100 cycles per minute (250 with double jaws)

Noise level: <70db

Machine dimensions (mm): 2380 x 1350 x 1290 (height)

Electrical consumption Installed power: 4Kw

Standard voltage: 400V 50 Hz

Bags dimensions Max. width: 250 mm

Max. height: 150 mm

Length: from 50 mm to 650 mm

Film Reel Max. width: 600 mm

Core diameter: 76 mm

Packaging material: polypropylene, coupled material with paper, aluminium, etc.

ACCESSORIES:

Automatic infeed, Hot print unit, Device for alcool, Foto-cell for Printed films, Wheels, Etc.
